### **REPORT ON HOW TO WRITE ONLINE LESSON PLAN**

DATE: 16<sup>th</sup>Oct, 2020

One thing that sets apart an online course from an online classroom is the audience.

In your virtual classroom, your audience is made of students you know well and they are generally of the same age and circumstances. As you are already aware of their learning patterns, strengths, and weaknesses, it's easier for you to [create a lesson plan](#) to suit their needs.

In case you are not, you can start by evaluating their existing knowledge with a quiz, or simple quick activity like a concept map.

A clear objective is essential to stay focused throughout the course-plan of your lesson, and it should be emphasized to your students at the very beginning to help them stay on track.

The objective of your lesson should focus on what your students will be able to achieve at the end of it. For example, it may be to help your students learn a new skill or learn about a new concept. To set a clear objective, try starting with "I want my students to be able to..."

This will simplify the process of specifying the content, as what should be included in your lesson is what will eventually help your student achieve the defined objective.

Research has shown that humans tend to remember 80% of what they see while only 20% of what they read and 10% of what they hear, which is why visuals have an important role to play in teaching, especially when it's done online.
